HOW TO:
start KVANT laser display system

KVANT®

1. Connect the system

A: To control the system with an external signal such as Ethernet, DMX or ILDA, plug the corresponding cable into its designated connector at the back of the unit.

B: Connect the Emergency STOP Remote to the socket labelled as REMOTE INPUT with a supplied 3-pin XLR cable.

C: Insert the Remote Interlock Bypass dongle to the E-STOP Remote to disable the interlock *(the USA only)*.

D: Use supplied Neutrik powerCON TRUE1 power cable to connect the laser system to mains power supply using the INPUT connector.

2. Insert safety keys

A: Turn laser system safety key to ON position.

B: Turn E-STOP Remote key to ON position.

3. Disable the Interlock

A: Release the E-STOP button by pulling it upwards.

B: Press the START button on the E-STOP Remote.

4. After the Emission Delay Period, the laser projector will be ready to start the emission.
